

Lab 12-2-2: How to Setup a SYSLOG Server to Log Network Events on Windows 10

Setup a SYSLOG Server to Log Network Events on Windows 10

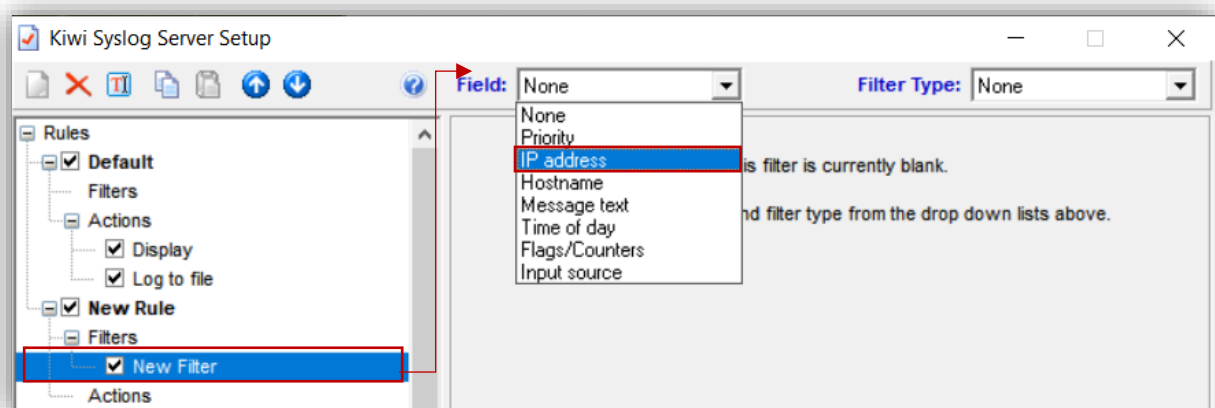

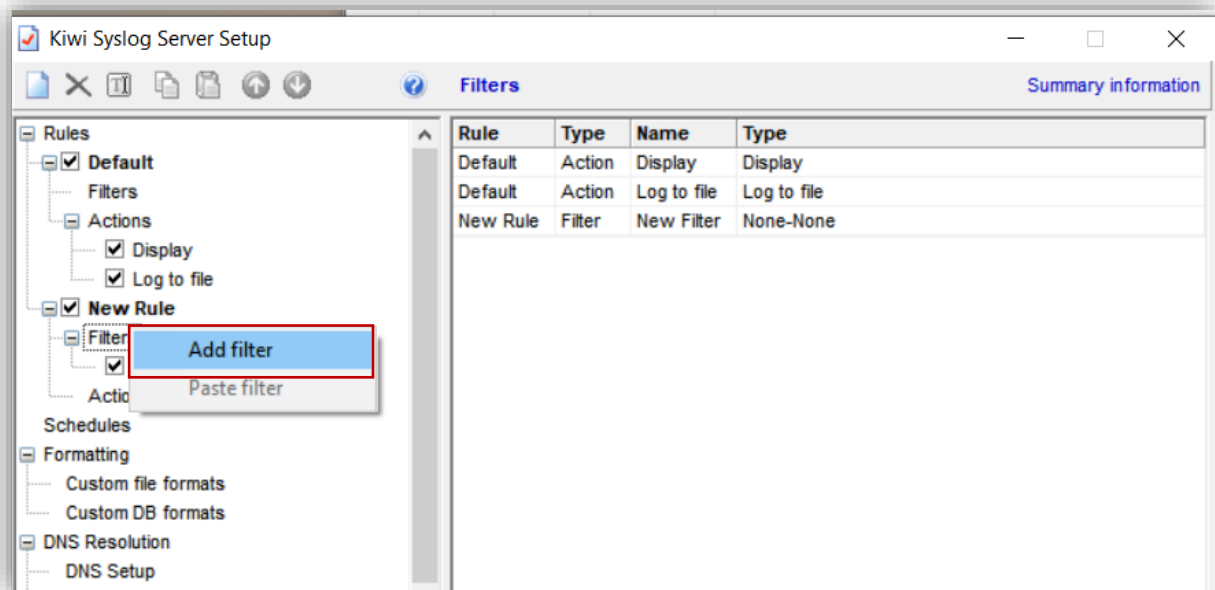

Lunch the app after installation:

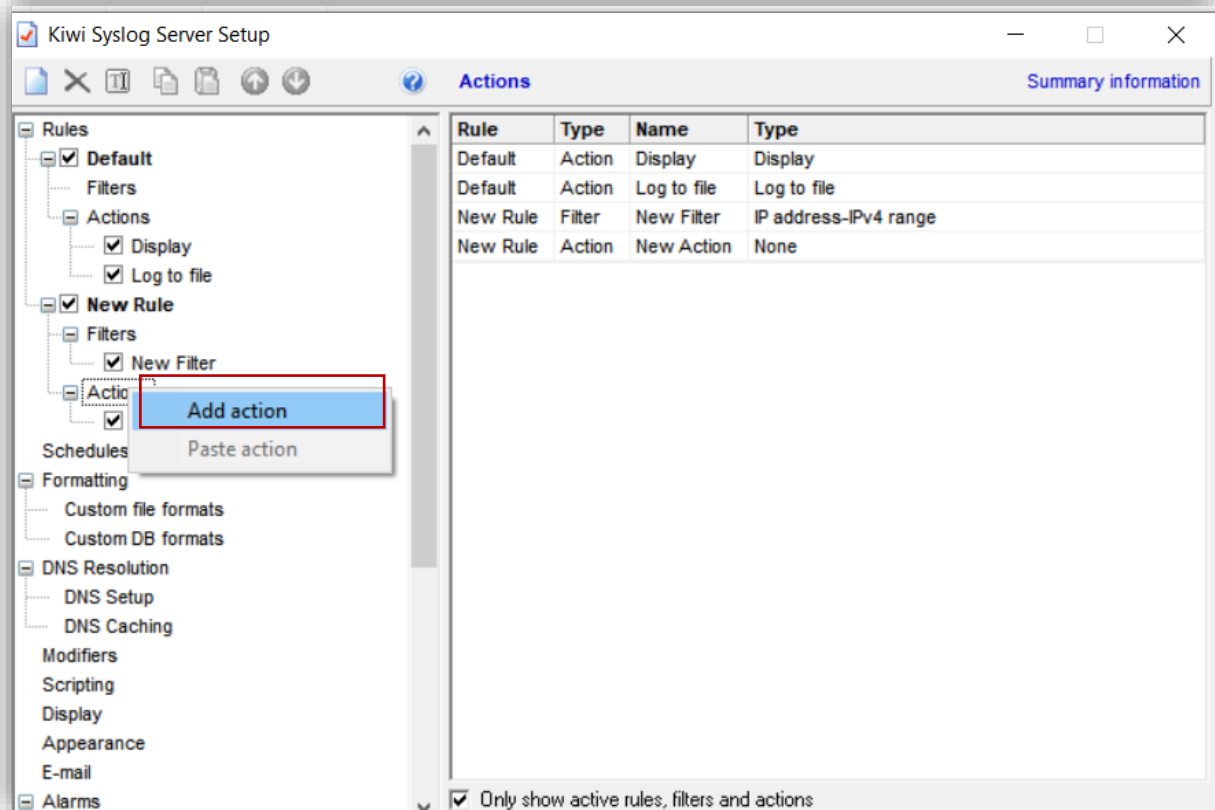

Add new rule:

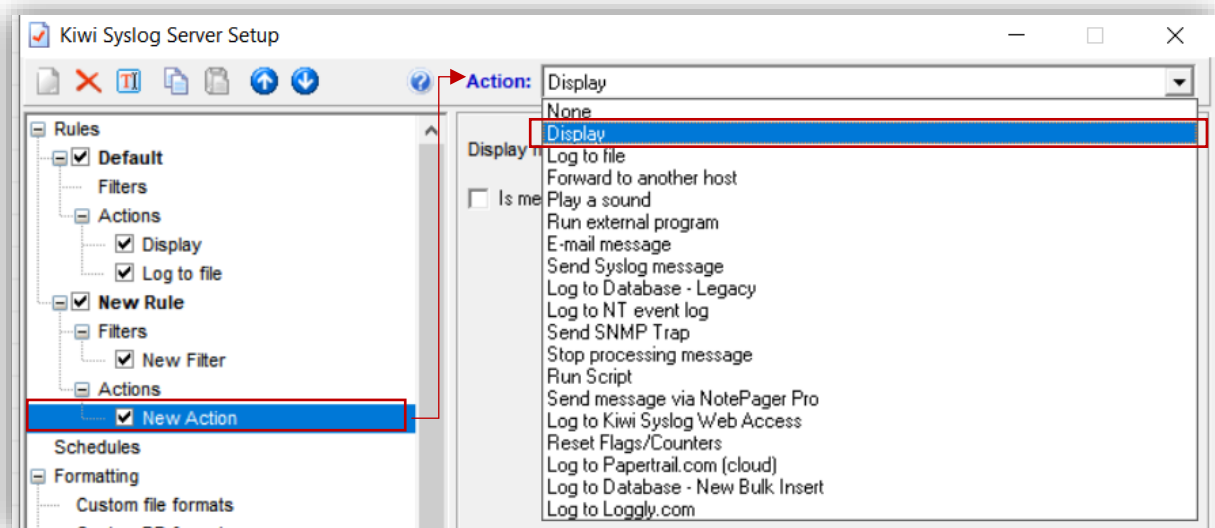

Add new filter then choose the field:

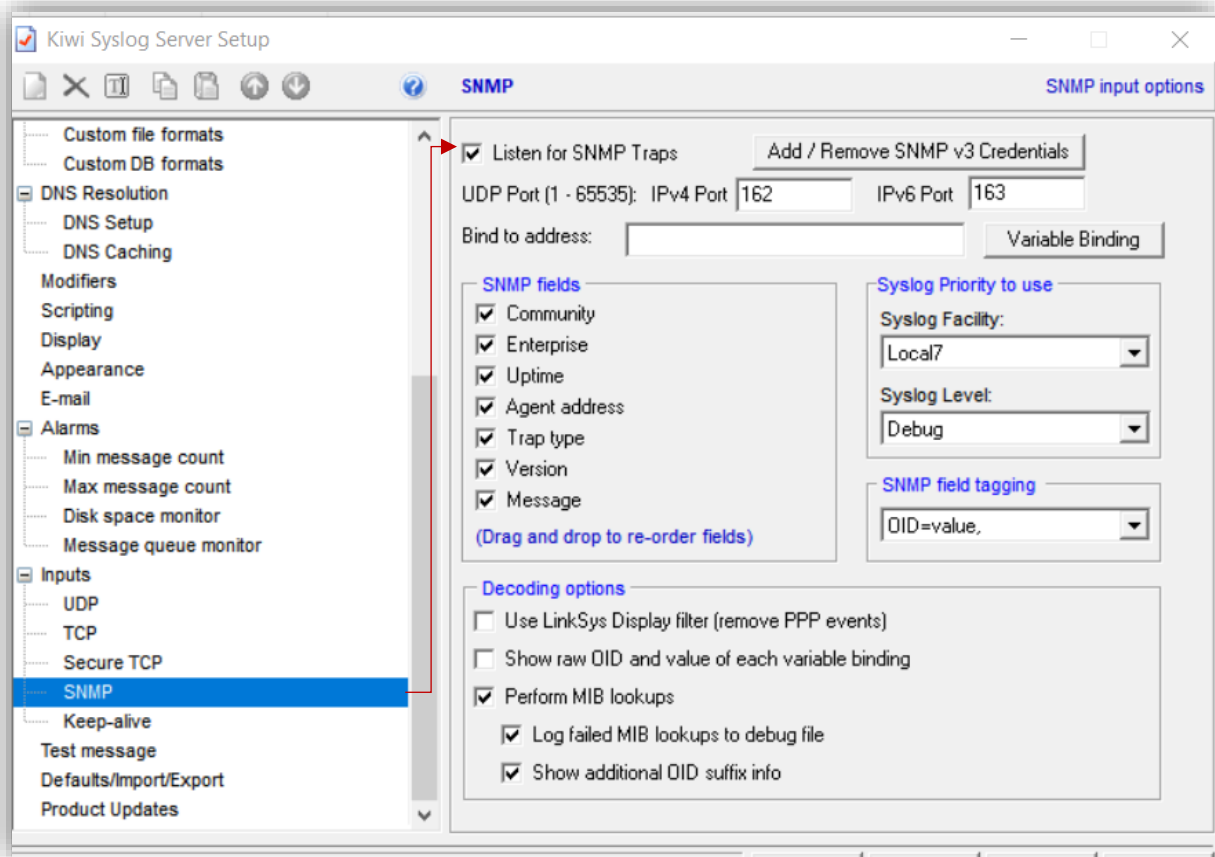

Add new action:

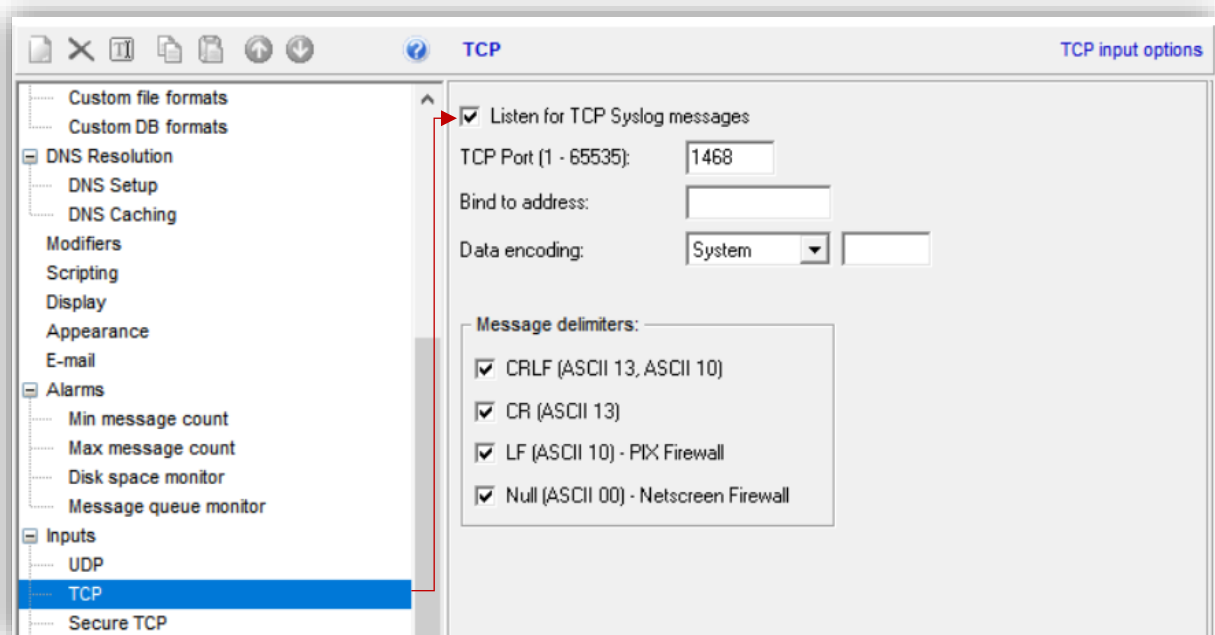

And choose the type:

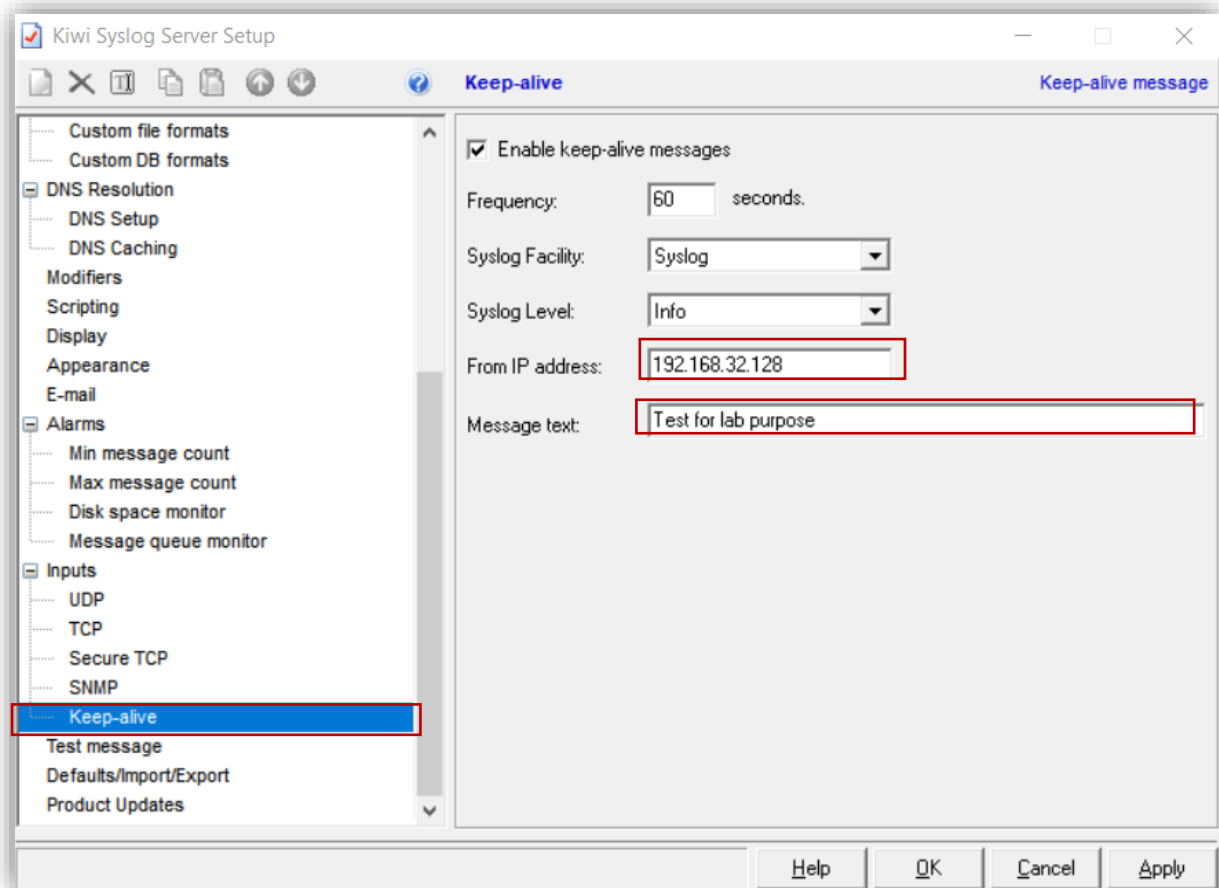

Check SNMP:

Check TCP :

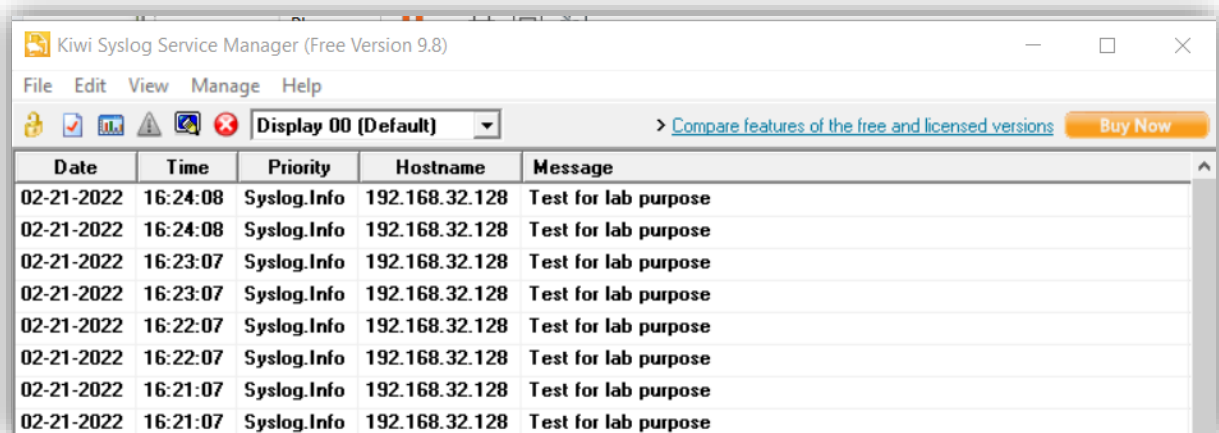

The final step before capturing the logs:

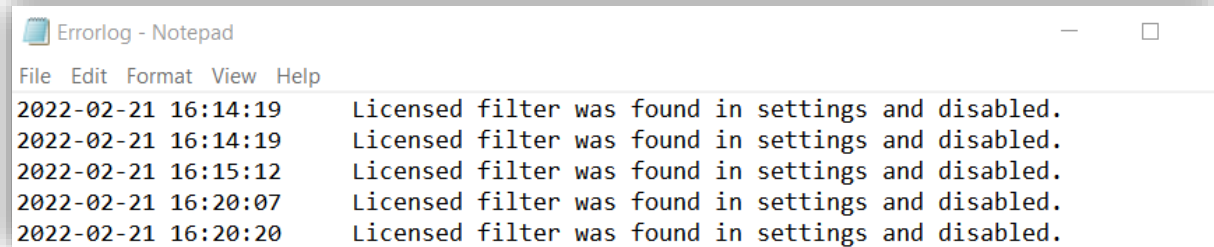

After setup things hit apply then ok.

Now let's see the application capture the Syslog:

all the messages sent to the server on the UDP port 514 or any other that you have configured will be displayed.

```
Errorlog - Notepad
